PRESENTAZIONE

The GOVERN^{ET} Project was established in 2004 within the framework of the INTERREG IIIB CADSES Community Initiative. Its aim is the promotion of decision-making models and procedures for the governance of rural areas bearing in mind the principles of sustainable development to integrate all the economic activities performed in the involved area (agriculture, industry, tourism, services), especially highlighting agriculture as the generator of quality goods and services.

The GOVERN^{ET} Project covers a number of territories in Italy (peri-urban area of Venice, Mountainous area of Pordenone, Upper Livenza) and abroad (regions of Larissa and Kavala in Greece). Despite their very diverse social, economic and environmental conditions (peri-urban areas, mountainous and piedmont areas, rural river areas, hilly areas) these territories share a concern as to the approach to governance and rural development issues.

The conference offers not only an opportunity to present implemented methods and achievements, but is also a chance to reflect upon the meaning of the issue of local planning and governance in view of the European rural development policies for the 2007-2013 period.

GOVERN^{ET} Project
